

On April 9, as part of the Week of Science, an online lecture on the topic “Peculiarities of the development of scientific projects” was read by the head of the Biotechnology Educational and Scientific Center, Professor, Doctor of Biological Sciences Sagyndykova Sofya Zulkharnaevna. The lecture was held on the Zoom platform.

During the lecture with first-year students of the specialty "Biology" and staff of the department, information was provided on the preparation of research projects, topic selection, planning, importance, economic directions of the project and expected results. In addition, the requirements for the preparation of the project, the rules of work, and grant funding were discussed.

An example is the technology of making natural soap. The composition and cosmetic value of natural soap are explained.
